SUMMARY

Electronics & Communication Engineering undergraduate (SRM Institute of Science and Technology, Class of 2028) building blockchain and full-stack products end-to-end. Hands-on experience writing and deploying smart contracts on Stellar/Soroban and Ethereum/EVM (Solidity, Hardhat, Foundry), integrating wallets and testnets, and shipping full-stack apps with React, Next.js, Node.js, and Firebase. Also builds AI workflow automation and embedded/IoT systems. Seeking a Blockchain / Full-Stack Developer Internship to help build and scale Web3 infrastructure.

TECHNICAL SKILLS

- **Blockchain / Web3:** Stellar, Soroban Smart Contracts, Solidity, Hardhat, Foundry, Wagmi v2, RainbowKit, Wallet Integration (Freighter), DeFi Protocols, Liquid Staking, Sepolia & Horizon Testnets
- **Full-Stack Development:** React, Next.js, Tailwind CSS, Bootstrap, Node.js, Firebase, HTML
- **Programming Languages:** Python, C/C++, JavaScript, Solidity
- **Embedded Systems / IoT:** Arduino (Uno/Nano/Mega/Mini), ESP8266, ESP32/ESP32-CAM, Raspberry Pi Pico W, MQTT, BLE, PID Control, PCB Design (KiCad), Fusion 360
- **Tools & Workflow:** Git, GitHub, VS Code, n8n Workflow Automation, AI-assisted Development (Claude, GitHub Copilot)

EXPERIENCE

Member, Web Dev Domain — Next Gen-AI — SRM Institute of Science and Technology 2025 – 2026

- Collaborated within a cross-functional student team to plan and execute technical events and Web Dev Domain initiatives.
- Owned task tracking and cross-team communication, keeping deliverables on schedule across multiple concurrent activities.

PROJECTS

StellarPay — *Stellar, Web3, Smart Contracts, React*

- Built a decentralized cross-border payment platform on the Stellar blockchain with Freighter wallet integration and Horizon Testnet connectivity.
- Optimized transaction processing logic to reduce latency for low-cost financial transfers.

sXLM Liquid Staking — *Stellar, Soroban, Smart Contracts, DeFi*

- Built a liquid staking protocol for XLM that lets users earn staking rewards while retaining token liquidity.
- Designed Soroban smart contract logic for token minting, multi-asset collateral pooling, and yield distribution.

STLR Token Staking dApp — *Solidity, Hardhat, Ethereum*

- Developed and deployed a token staking dApp on a local Hardhat/Ethereum environment, implementing staking, reward accrual, and withdrawal logic in Solidity.
- Extended the toolchain with Foundry, Wagmi v2, and RainbowKit for Sepolia testnet deployment and wallet connectivity.

n8n AI Agent Hub — *n8n, Node.js, AI Agents, Automation*

- Engineered automated workflow systems integrating 2,000+ AI agent tools and third-party APIs.
- Streamlined multi-step tasks including data extraction, LLM orchestration, and backend triggers.

Code for all projects: github.com/ANSHSINGH5999

ACHIEVEMENTS

- 1st Position — Robofest Line Follower Competition
- Participant — Technoxian 2025, Noida

EDUCATION

B.Tech, Electronics and Communication Engineering (Specialization: Computer Engineering)

SRM Institute of Science and Technology, SRM Nagar, Potheri, Kattankulathur, Chengalpattu District, Tamil Nadu – 603203, India
Expected 2028 | CGPA: 8.1
